## RE: MICROFLOWN OPEN DAY FOR ENGINEERS 11 th MAY 2019

Microflown AVISA ([www.microflown-avisa.com](http://www.microflown-avisa.com)) is NATO's unicorn in acoustic situational awareness. As acoustics is a passive sensing technology, there is a rapidly increasing interest in our distributed and unattended capability to detect, locate, track and classify all sorts of audible events in the battlefield:

- drones, helicopters and heavy ground vehicles
- rockets, artillery, mortars

With an international staff of around 45 highly motivated colleagues, we still have many ideas on our plates that remain unaddressed of other time relevant priorities in the domains of:

- signal processing
- embedded systems
- software testing
- wireless (mesh network) communications
- optical communication
- virtual reality
- sensor development
- printed circuit board design
- FPGA's
- multi-copter drones

On Saturday, the 11 th May 2019, between 0930-1200 hrs, Microflown AVISA opens its door for HTS/ university students and recently graduated engineers to visit our facilities and discuss with our engineers potential (graduation) work.

If interested, please send your CV by the latest the 8 th May 2019 to Melinda Os, [os@microflown.com](mailto:os@microflown.com)

We will confirm your visit then, which is strictly personally.  
We will reimburse public transportation costs, if any, against invoice.

Microflown AVISA is located in the former HQ of AKZO, Tivolilaan 205, 3rd floor, 6824 BV Arnhem.
